From April 13 to 15 the international agricultural business exhibition "Spring 2023" was held in the business center "Rāmava", which gathered together professionals and interested parties in the field of crop cultivation, livestock farming, gardening, construction and infrastructure.

Specialists of the Rural Support Service of Latvia (RSS) talked about the current topics of Common Agricultural Policy (CAP) and new conditions for receiving EU support. RSS representatives were also available at the information stand, where they provided answers to unclear questions and inquiries.

There were also representatives from the Ministry of Agriculture, Rural Consulting Center, State Forestry Service, University of Biosciences and Technologies in Latvia in the exhibition. Participants had a great chance to familiarize themselves with all the current issues of industry, development trends and forecasts, as well as meet with their industry experts.

After the exhibition it is possible to see seminar recordings presentations at the organizer's website and social media. More information is available: <https://www.aml-ramava.lv>.
